

ECOPERLA

ECOPERLA TWISTER ULTRAFILTRATION SYSTEM

DESCRIPTION

Ecoperla Twister is a small ultrafiltration system designed for installation under the sink. It improves the taste, smell and color of water, preparing it for direct consumption. The filter is equipped with 4 filter cartridges: a preliminary cartridge, a carbon block, an ultrafiltration membrane and a carbon cartridge with nanosilver. Thanks to nanosilver technology, the final insert creates a barrier against the development of microorganisms. The filter removes contaminants from water such as: suspensions, turbidity, chlorine, heavy metals, pesticides, microplastics and bacteria. Filter cartridges only need to be replaced once a year or after filtering 10,000 liters of water.

CHARACTERISTICS

- Small dimensions and aesthetic design
- High cartridge efficiency (up to 10,000 liters of water)
- An ecological way to improve water quality
- Preserves natural minerals in water
- No waste discharge
- Bacteriostatic cartridge with nanosilver
- Pressure reducer included
- Anti-flood system included
- Easy to install and service

TECHNICAL SPECIFICATIONS

Filter dimensions (H/W/D)	32 x 34,5 x 8,1 cm
Efficiency	3 l/min
Pressure (min/max)	2/4 bar
Temperature (min/max)	4/40 °C
